

Penetration Testing Report : Mediroza General Hospital

Target : <https://medirozahospital.com>

Summary :

The objective was to identify exploitable vulnerabilities . The assessment identified four findings , including two critical vulnerabilities that together allowed an unauthenticated attacker to bypass patient portal authentication via SQL injection , access and download confidential patient pathology lab report .

Scope & Methodology :

Methodology :

- Passive and active reconnaissance (WHOIS , DNS , HTTP , robot.txt/sitemap.xml)
- Directory and content discovery (gobuster)
- Web application testing of authentication mechanisms
- Offline password auditing of retrieved encrypted documents

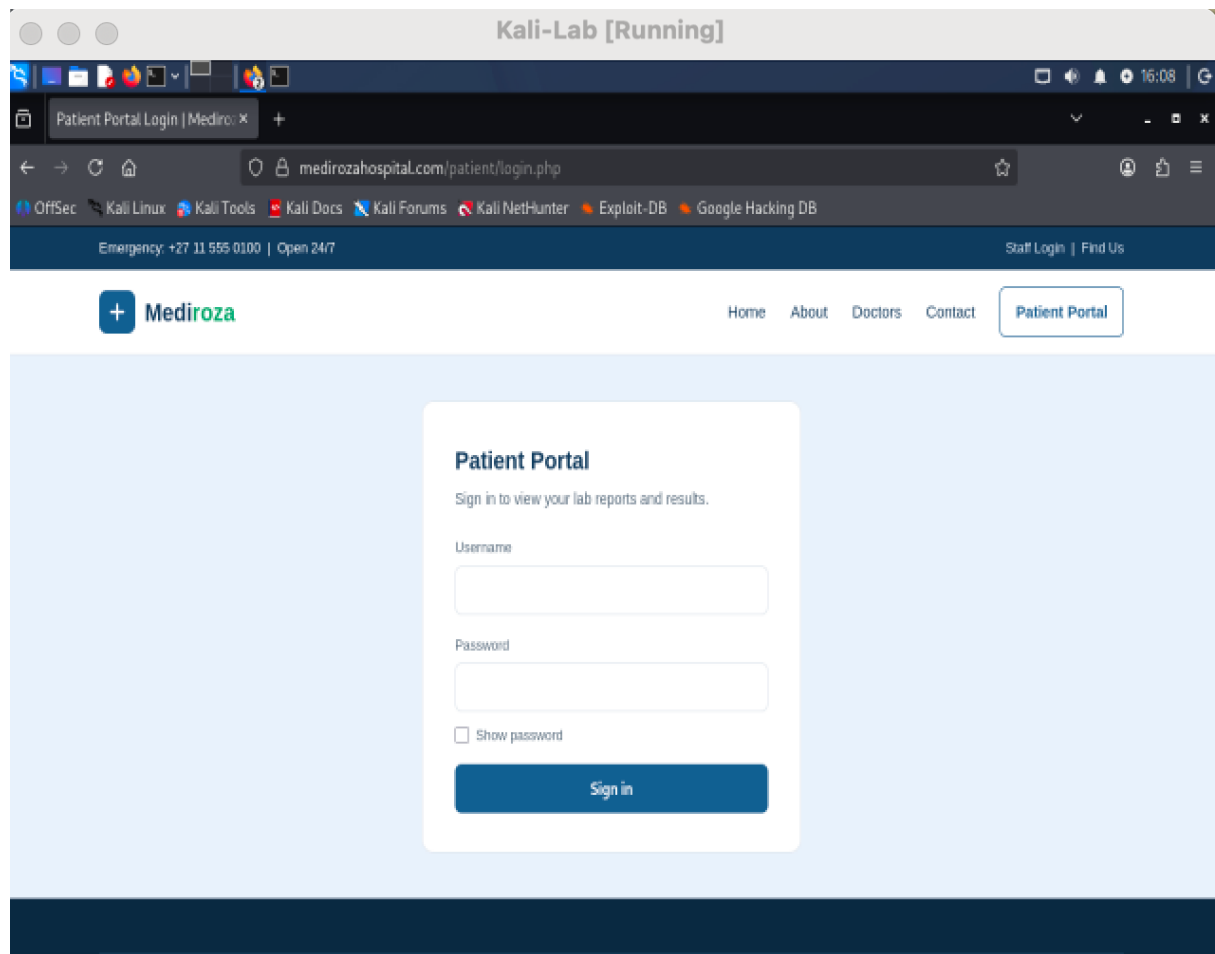

Tools :

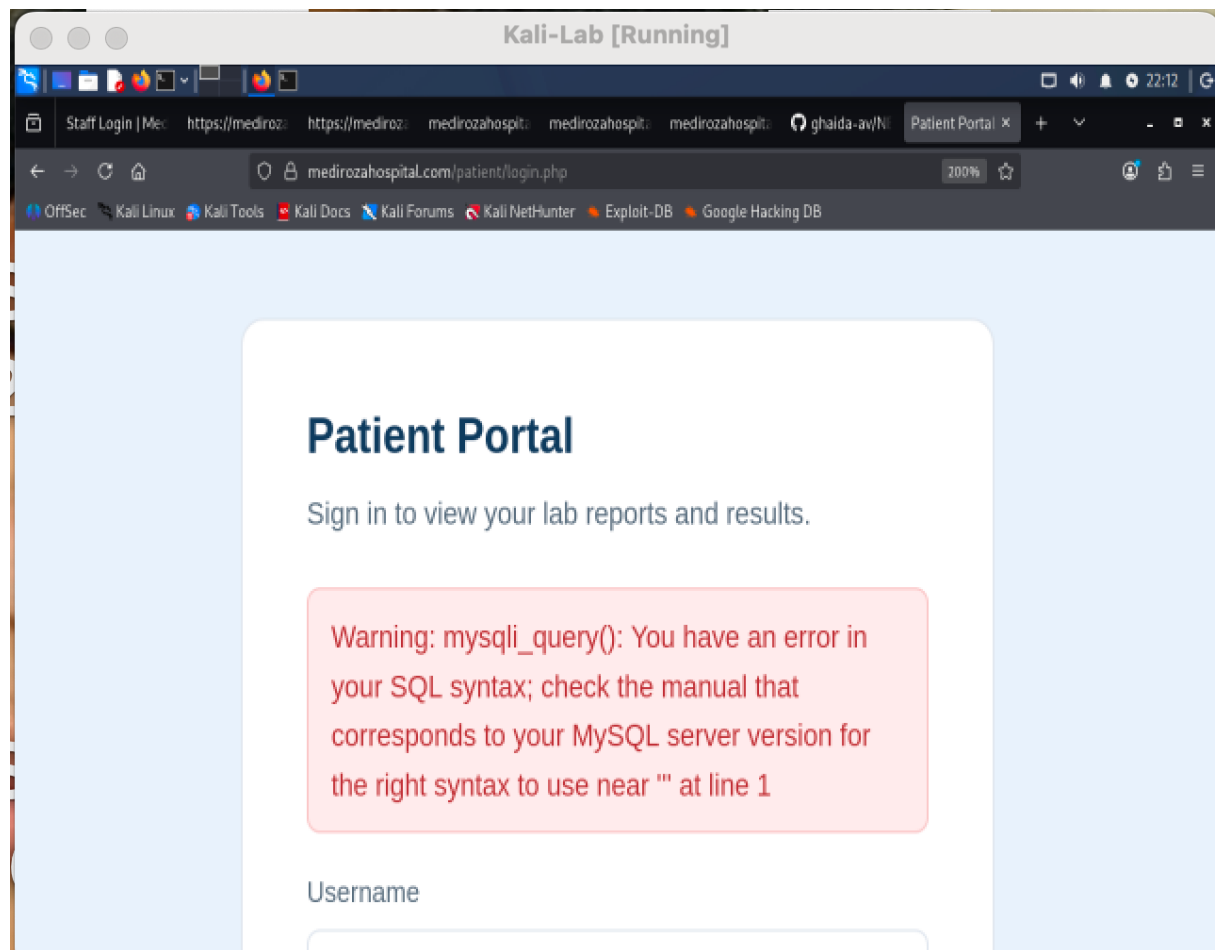

- Kali linux : whois , whatweb , curl , dnsrecon , gobuster
- Firefox
- Qpdf : PDF encryption inspection and decryption
- Python3 + pikepdf : password recovery
- Rockyou.txt wordlist : common password dictionary attack

SQL injection Authentication Bypass :

Severity : critical

Location : <https://medirozahospital.com/patient/login.php>

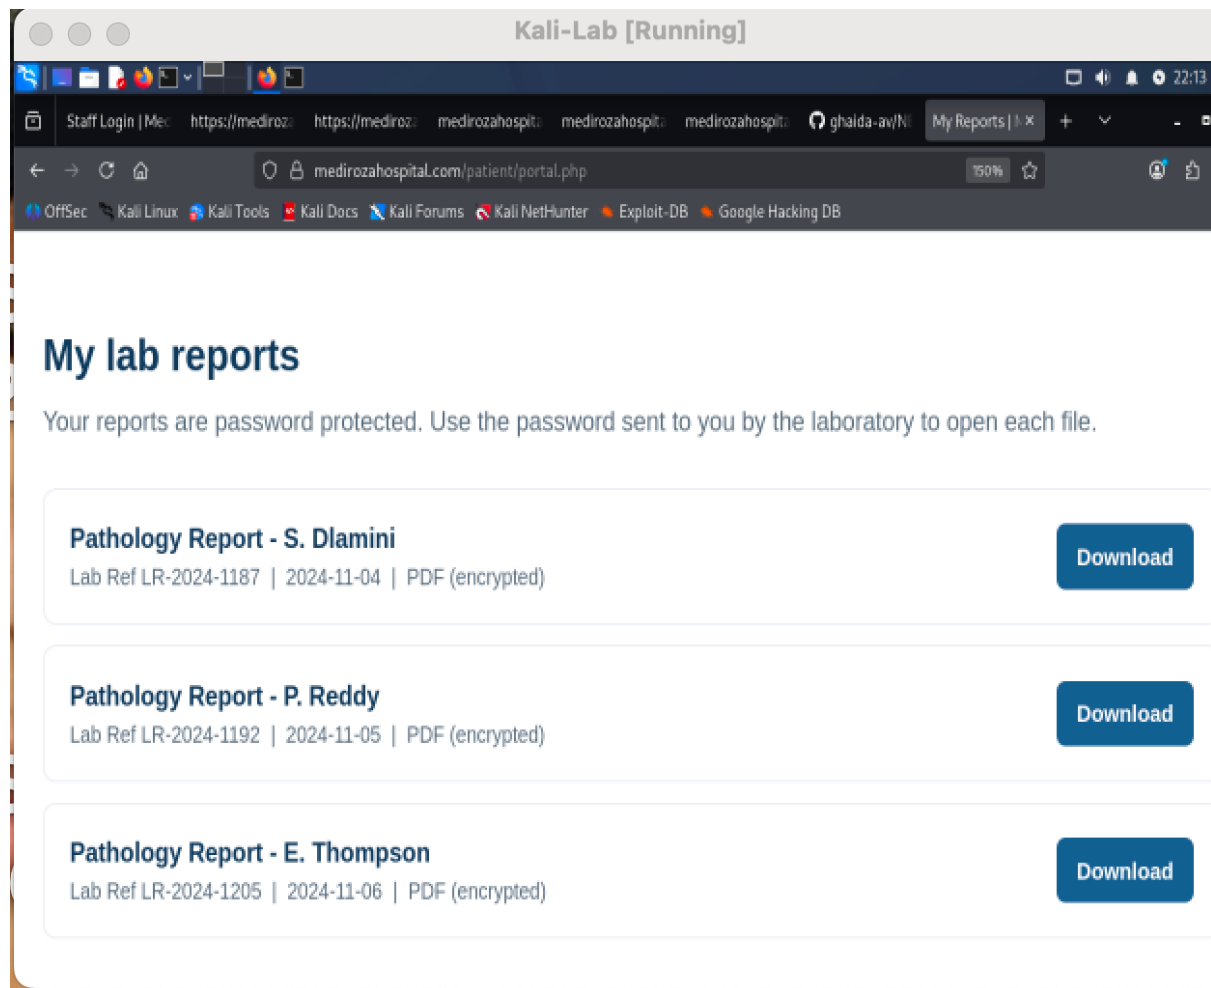

Username : '1'='1-- Password : test

Then tried : Username : admin'-- Password : test

And it got open

Weak PDF password :

Severity : High

Location : patient portal -> my lab reports -> download

```
